

PANDORAS BOX MANAGER

REAL-TIME EDITING.

The Pandoras Box Manager re-defines real-time editing and playback control. This standalone software allows synchronization and remote control of all Pandoras Box media playback products via network.

The built-in sequences and cue based timeline interface enables you to control Pandoras Box Servers, Players as well as interfacing with all kinds of external controllers via TCP/IP, Serial RS232/422, SMPTE, DMX, Art-Net, analog and digital industrial sensors.

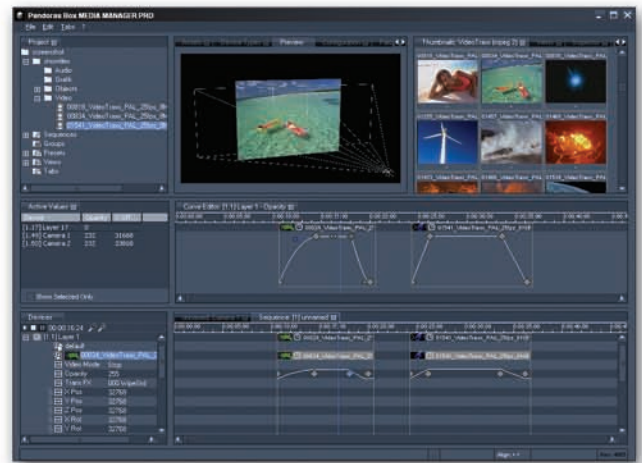

The Manager acts as both, a remote file manager and a master, synchronizing any connected client system with sub-frame accuracy for demanding applications.

Similar to standard compositing and non-linear editing software solutions, the project orientated user-interface is quick and easy to learn.

All Pandoras Box systems share a unique user-interface that allows fast configuration and programming workflow.

The interface is context-sensitive and optimized for live applications. The system is open for multiple input protocols and offers an easy and direct access to all controls.

Individual view layouts allow you to arrange the interface the way you want by creating new tabs and views that can be stored and recalled on the fly.

PANDORAS BOX MANAGER KEY FEATURES

Depending on the budget, size and complexity of your project, Pandoras Box Manager is available in three versions. All packages provide timeline editing with the Pandoras Box Media-Net synchronisation and remote file management.

The Manager connects to any Pandoras Box Server or Player via network and provides remote control as well as automatic file spreading to all connected playback clients.

Full Control

Pandoras Box Manager is designed for live showcontrol and allows to control various external devices such as routers, switchers, lighting fixtures and many more.

Like all Pandoras Box products you may choose from one of the many protocols to control the system.

TCP/IP, SMPTE, RS232/422, Art-Net, DMX are currently supported.

Integrated Jog/Shuttle Controller

For intuitive live editing Pandoras Box Manager ships with an external Jog/Shuttle controller (STD & PRO versions) and a Playback extension to control up to 8 timelines simultaneously (PRO version only).

Pandoras Box Manager is available in three upgradeable versions:

Pandoras Box Manager PRO

- 8 separate playback timelines,
- Playback Extension and programming unit
- Jog/Shuttle controller

Pandoras Box Manager STD

- 2 separate playback timelines
- Jog/Shuttle controller

Pandoras Box Manager LT

Software-only single timeline sequencer

A 19" hardware system is available upon request.

Optional Accessories

- DMX Link, USB DMX Input
- DMX Link 8, Art-Net based 8xDMX I/O processor
- Serial Link, network based 4 port RS 232/422 serial output
- Sensor Link, network based sensor processor
- SMPTE Link, USB Timecode input or output interface
